PSC NO: 10 – Electricity Statement Type: VDER - CRED

Consolidated Edison Company of New York, Inc.

Statement No.: 34

Initial Effective Date: 07/01/2020 Page: 1 of 4

# STATEMENT OF VALUE OF DISTRIBUTED ENERGY RESOURCES VALUE STACK CREDITS

For customers taking service under the Value Stack provisions pursuant to Rider R, Net Metering, Value Stack Tariff for Customer-Generators, of Schedule PSC No. 10 – Electricity, and Value Stack Tariff for PASNY Customer-Generators, of Schedule for PSC No. 12 – Electricity, the credit shall be calculated by summing the Value Stack Components, as applicable, and multiplying the total credit by the net hourly injections.

For applicability of these rates towards a customer's compensation, please see the provisions outlined in Rider R.

### Value Stack Phase Two:

| Credit             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Consolidated Edison Company of New York, Inc.

Statement No.: 34

Initial Effective Date: 07/01/2020 Page: 3 of 4

#### STATEMENT OF VALUE OF DISTRIBUTED ENERGY RESOURCES VALUE STACK CREDITS

Notes:

1. For the NYISO Day-Ahead Hourly Prices by zone (i.e. H, I, or J), please refer to the NYISO's web page: http://www.nyiso.com

2. The compensation using these rates will be adjusted for losses.

3. The proxy capacity factor and the monthly solar production as determined in Case 15-E-0751 are as follows.

|                           | Lower Hudson Valley | New York City |
|---------------------------|---------------------|---------------|
| Solar production (kWh/kW) | 76.9                | 77.9          |
| # of Hours                | 240.0               | 240.0         |
| Proxy capacity factor     | 32.0%               | 32.5%         |

|           | Monthly Solar Production |               |  |
|-----------|--------------------------|---------------|--|
| Month     | Lower Hudson Valley      | New York City |  |
| January   | 53.4                     | 56.3          |  |
| February  | 72.3                     | 74.0          |  |
| March     | 105.5                    | 109.4         |  |
| April     | 116.5                    | 119.9         |  |
| May       | 132.4                    | 133.9         |  |
| June      | 138.5                    | 141.4         |  |
| July      | 136.1                    | 138.6         |  |
| August    | 135.2                    | 137.9         |  |
| September | 110.2                    | 111.2         |  |
| October   | 83.1                     | 88.6          |  |
| November  | 59.5                     | 65.0          |  |
| December  | 46.3                     | 49.8          |  |
| Total     | 1,189.0                  | 1,225.9       |  |

The proxy capacity factor is determined for each area using the solar PV load curves and the five hours beginning 2 PM through the end of the hour beginning 6 PM on non-holiday weekdays from June 24 to August 31.

4. These rates are only applicable to customers who have, during the effective period of this Statement, paid 25% of their interconnection costs or who have executed their interconnection agreement if no such payment is required or, for a customer opting into the Value Stack Tariff that has already met either of these criteria in the interconnection process, at the time the customer opts-in to the Value Stack Tariff and will remain in effect for such customer-generators for the period of time as outlined in Rider R.
