GENERAL INFORMATION

13. SERVICE CLASSIFICATION RIDERS (Continued)

RIDER N (Continued)

NET METERING FOR CUSTOMER GENERATORS

APPLICABILITY (Continued)

- (F) For a residential customer, micro-combined heat and power ("Micro-CHP") generating equipment with a rated capacity of at least 1 kW and not more than 10 kW. Prior to commencing service under this Rider, a customer with Micro-CHP generating equipment must submit technical documentation, acceptable to the Company, establishing that the equipment meets the requirements specified in Public Service Law Section 66-j and in the SIR. No more than once annually thereafter, the Company may require the customer to submit technical documentation in order to establish continued eligibility. A customer who fails to provide documentation acceptable to the Company within 30 days of a Company request will be deemed ineligible to take service under this Rider until the first billing cycle commencing after acceptable documentation is provided.
- (G) For a residential customer, fuel cell generating equipment with a rated capacity of not more than 10 kW.

Customers with generators that exceed the rated capacity thresholds in (A) - (G) above are required to take service under Service Classification No. 25 of this Rate Schedule.

If a residential customer has solar and/or wind electric generating equipment as well as Micro-CHP and/or fuel cell electric generating equipment, each eligible for service under this Rider, the customer will qualify for service under this Rider only if the load served by the residential Micro-CHP and/or fuel cell electric generating equipment is not served under the same net-metered account as the load served by the solar and/or wind electric generating equipment.

Service under Rider N will be offered, on a first come, first served basis, to a limited level of participation. The total of the rated generating capacity of all the farm waste, residential solar, non-residential solar, micro-combined heat and power, and fuel cell electric generators in the Company's service area shall not exceed 10.4 MW, or 1.0% of the Company's 2005 system peak demand. The total of the rated generating capacity of all residential, non-residential and farm wind electric generators in the Company's service area shall not exceed 3.1 MW, or 0.3% of the Company's 2005 system peak demand.
