## GENERAL INFORMATION

### 15. Solar Non-Residential Electric Service Option (Cont'd)

#### Calculation and Application of Net Metering Credits

In a month where the Host Account has Excess Generation, the Excess Generation will be converted to the equivalent monetary value at the per kWh rate applicable to the Host Account's service classification including any Solar Non-Residential Host Accounts.

Remote net metering credits shall be defined as the Excess Generation multiplied by the Host Account's applicable tariff per kWh rates.

The remote net metering credit will first be applied to the Host Account's current electric bill. Any remaining monetary credit will be allocated between the Host Account and the Satellite Accounts. The portion designated for the Satellite Accounts will be applied to the Satellite Account bills as each subsequent Satellite Account bill is calculated. In the case of two Satellite Accounts billed on the same day, the credit will be applied to the highest usage account first.

The credit applied to each Host or Satellite Account shall not exceed the current electric delivery charges, and if applicable, RG&E supply charges. If a monetary credit remains after applying credits to all designated Satellite Accounts, the credit will be carried forward on the Host Account and the allocation process between Host and Satellite Accounts will repeat until the value of the excess credits is zero or until all associated accounts are finalized.

Net Metering Credits shall not be applied to arrears on the Host Account or Satellite Account.

Upon the Corporation's determination that the customer has taken service under this Section 13 while in violation of the conditions of service set forth in this Schedule, the customer shall forfeit any positive balance accrued during the annual period in which the violation occurred.

#### Account Closure

Any remaining monetary credits will not be cashed out or transferred.
