

PSC NO: 15 ELECTRICITY LEAF: 188  
COMPANY: CENTRAL HUDSON GAS & ELECTRIC CORPORATION REVISION: 2  
INITIAL EFFECTIVE DATE: 03/22/07 SUPERSEDING REVISION: 1

SERVICE CLASSIFICATION NO. 3 (Cont'd)

LARGE POWER PRIMARY SERVICE (Cont'd)

SPECIAL PROVISIONS (Cont'd)

3.1 (Cont'd)

In the event that the total rated generating capacity of wind electric generating equipment that provides electricity to the Company through the same local feeder line exceeds twenty percent of the rated capacity of the local feeder line, the customer owning or operating such equipment may be required to comply with additional measures to ensure the safety of the local feeder line. Wiring and switches of these facilities may be arranged in parallel so as to permit the flow of current from the customer to the Company and vice versa.

Customers shall be responsible for the costs of any new meter box and socket, to the extent required, for installations that require an additional meter to measure the generator's output.

Customers with farm service wind generating equipment who satisfy all installation and operation requirements will be allowed to combine their energy purchases from and sales to the Company in a billing period. In the event that:

- (i) the amount purchased from the Company exceeds the amount sold to the Company (net purchases) in a billing period, the customer will be billed for the difference at applicable rates specified in this Service Classification.
- (ii) the amount sold to the Company exceeds the amount purchased from the Company (net sales) and the customer's farm service wind generator does not exceed 10 kW, the difference will be transferred to the following billing period and added to amounts sold by the customer in that period. In that latter period, differences will either be billed at applicable rates as in (i) above, or transferred to the following billing period depending on whether the differences represent net purchases or net sales, respectively.
- (iii) the amount sold to the Company exceeds the amount purchased from the Company (net sales) and the customer's wind generator exceeds 10 kW, the excess on-site production will be converted to a credit at the applicable rate under Service Classification No. 10 and applied to the customer's account.
- (iv) the difference at the end of twelve (12) months from the time the customer contracted for this service represents net sales to the Company, the Company will pay the customer for this difference at the applicable rate under Service Classification No. 10.

Farm service wind generators may not offset net metering credits against bills for usage metered at locations other than the net metering delivery point.
