

R. Restrictions and Limitations of Gas Service: (Cont'd.)

not be accepted nor will service be rendered to any new gas customer, nor additional gas supplied to existing customers, except under the following conditions;

- (a) To individually metered one and two-family residential structures.
- (b) To any other individually metered customer whose total annual usage will not exceed 12,000 MCF.
- (c) To residential structures consisting of three or more units when the total annual usage will exceed 12,000 MCF gas for any purpose except space heating.
- (d) To existing commercial and industrial customers for greater use of gas for non process use; provided, however, that such greater use under this subsection shall not increase such customer's total annual usage of gas by more than 12,000 MCF above such customer's greatest single calendar year usage in the period 1969 through 1975; provided further, however, that greater volumes of gas shall not be permitted for additional boiler equipment under this subsection.
- (e) To commercial and industrial customers for process use for which there is no feasible alternate fuel and for which as is needed for its chemical burning characteristics. Process use shall not include combustion for the purpose of raising steam regardless of the use to be made of such steam. For purposes of this subsection, propane shall not be deemed to be an alternate fuel.
- (f) To any customer, to the extent such Customer is not entitled to additional service under (1) through (5) of this Rule R.1, gas for any purpose; provided such customer shall have installed and shall thereafter maintain full capability to use an alternate form of energy in lieu of gas for all purposes for which additional gas obtained is to be used, provided further that if such customer has heretofore obtained gas service for which maintenance of dual fuel capability was a condition, under this Rule or any previously filed Rule of the
