

PSC No: 120 - Electricity
New York State Electric & Gas Corporation
Initial Effective Date: February 5, 2009

Leaf No. 117.3
Revision: 2
Superseding Revision: 1

GENERAL INFORMATION

23. Wind Electric Generating System Option (Cont'd.)

Non-Time-Differentiated / Non-Demand Billed Customers Requesting One Meter (Cont'd.)

For non-time-differentiated, non-demand-billed customers with wind electric generating equipment of more than ten kilowatts that choose to have usage and generation measured through one, standard single energy meter, for any excess customer generation, the Corporation shall provide the customer a credit equal to the product of the positive excess generation balance times the Corporation's avoided cost for energy.

Annual Reconciliation

For all customers taking service under this Section, if (a) on an annual basis, during the term of the SIR Contract or (b) on the date the SIR Contract is terminated pursuant to the terms and conditions of said Contract, there exists a positive (kWh) balance in the Credit Account, then the Corporation will issue the customer a cash payment. The payment shall be for an amount equal to the product of the positive Credit Account (kWh) balance times the Corporation's average avoided cost for energy over the most recent 12-month period. The balance in the Credit Account shall be reset to zero once the Corporation makes the cash payment. Upon the Corporation's determination that the customer has taken service under this Section 23 while in violation of the conditions of service set forth in General Information Section 23 of this Schedule, the customer shall forfeit any positive balance accrued in its Credit Account during the annual period in which the violation occurred.

24. Electric Hybrid Generating System Option

Applicable to any residential customer who owns or operates both wind electric generating equipment as defined in General Information Section 23 and solar photovoltaic equipment as defined in General Information Section 26 of this Schedule ("Hybrid Facility") at the same location.

Customers electing service under this Section must operate in compliance with standards and requirements set forth in the Distributed Generation Interconnection Requirements found in PSC 119 - Electricity, Section 9 and Addendum-SIR to PSC 119. In addition, customers must execute the NYS Standardized Contract For Interconnection of New Distributed Generation Units With Capacity of 2 MW or Less Connected in Parallel with Utility Distribution Systems ("SIR Contract"), as contained within Addendum-SIR of PSC 119 - Electricity.

Customers Requesting Two Meters

For a customer requesting two meters, the Corporation will install (a) an appropriate meter for the customer's service classification to measure the electricity delivered to the customer (the "Billing Meter"), and (b) a non-demand, non-time differentiated meter to measure the electricity generated by the Hybrid Facility ("Credit Meter").
