## SERVICE CLASSIFICATION NO. 1 (Cont'd)

## <u>RESIDENTIAL SERVICE</u> (Cont'd)

## SPECIAL PROVISIONS (Cont'd)

## 1.2 (Cont'd)

costs charged by Central Hudson for a dedicated transformer(s) or other equipment, should it be determined to be necessary, shall not exceed \$350. The total photovoltaic generator load and farm waste electric generator load on Central Hudson's system may not exceed 12 MW. Wiring and switches of these facilities may be arranged in parallel so as to permit the flow of current from the Customer to the Company and vice versa.

Customers shall have the option of using a single meter with bi-directional capability to measure the flow of energy in both directions or of using two meters to separately meter the flow of energy in each direction. Customers electing to have their generator's output measured through a separate meter shall be responsible for the costs of any new meter box and socket, to the extent required. Customers electing the single meter option are advised that the use of a meter running in reverse may not be as accurate as a standard installation.

Customers with Residential Small Solar Electric Generators who satisfy all installation and operation requirements will be allowed to combine their purchases from and sales to the Company in a billing period. In the event that:

- (i) the amount purchased from the Company exceeds the amount sold to the Company (net purchases) in a billing period, the customer will be billed for the difference at applicable rates specified in this Service Classification.
- (ii) the amount sold to the Company exceeds the amount purchased from the Company (net sales), the difference will be transferred to the following billing period and added to amounts sold by the customer in that period. In that latter period, differences will either be billed at applicable rates as in (i) above, or transferred to the following billing period depending on whether the differences represent net purchases or net sales, respectively.
