

PSC NO: 15 ELECTRICITY LEAF: 213  
COMPANY: CENTRAL HUDSON GAS & ELECTRIC CORPORATION REVISION: 4  
INITIAL EFFECTIVE DATE: 08/21/03 SUPERSEDING REVISION: 3  
Issued in Compliance with Order in C.02-E-1619 & 02-E-1282 Dated August 5, 2003

SERVICE CLASSIFICATION NO. 6 (Cont'd)  
RESIDENTIAL TIME-OF-USE SERVICE (Cont'd)

SPECIAL PROVISIONS (Cont'd)

6.3 (Cont'd)

(iii) the difference at the end of twelve (12) months from the time the Customer contracted for this service represents net sales to the Company, the Company will pay the Customer for this difference at Energy only Contract rates pursuant to Service Classification No. 6.

The Company will combine these purchases and sales by first offsetting purchases from the Company during the peak period by the amount sold to the Company in a given billing period. Additional energy supplied from the solar generator will then be used to offset energy sales to the Customer during the off peak time period.

6.4 Farm Waste Electric Generation - Customers that own or operate farm waste electric generating equipment, as defined in Public Service Law Section 66-j, with a rated capacity of not more than 400 kW may supply their electric load and/or sell electric energy to the Company as set forth in General Information Section 3.C. The total farm waste electric generator load on Central Hudson's system may not exceed 3.2 MW.

Customers must enter into a Standardized Contract for Interconnection of New Distributed Generation Units with Central Hudson, pursuant to General Information Section 3.C and in compliance with Public Service Law Section 66-j, in order to take service under this Special Provision. Interconnection costs charged by Central Hudson for a dedicated transformer or transformers, should it be determined to be necessary, shall not exceed \$3,000. In the event that the total rated generating capacity of electric generating equipment that provides electricity to the Company through the same local feeder line exceeds twenty percent of the rated capacity of the local feeder line, the customer owning or operating such equipment may be required to comply with additional measures to ensure the safety of the local feeder line.

Wiring and switches of these facilities may be arranged in parallel so as to permit the flow of current from the Customer to the Company and vice versa. Customers will have the option of using one non-demand, non-time differentiated meter, running in reverse, or two meters which will enable the customer to deliver the energy generated by their farm waste system to the Company separately from the electric service delivered by the Company. Customers shall have the additional option of purchasing, at their own expense, a time-of-use meter as their second meter for the purpose of recording peak and off-peak on-site kilowatt hour production.

Customers owning or operating farm waste electric generating equipment who satisfy all installation and operation requirements will be allowed to combine their purchases from and sales to the Company in a billing period.
