GENERAL INFORMATION

PART II - RULES AND REGULATIONS

6. EXTENSION AND MAINTENANCE OF DISTRIBUTION PROVIDER FACILITIES (Cont'd)

C. PERMANENT SERVICE LATERALS (Cont'd)

(7) **Increase in Service Capacity**

- (a) The Distribution Provider will, at its own expense, increase the capacity of an existing, permanent, Distribution Provider-owned underground service lateral in the same location provided the increased capacity does not require the installation of pad mounted transformer(s) on the Retail Customer's property. When pad mounted transformer(s) are installed on the Retail Customer's property, the Distribution Provider will be responsible for the installation and maintenance of the transformer(s) and related services plus that portion of the service lateral between the transformer(s) and the Distribution Provider's distribution facilities. The Distribution Customer will be responsible for the costs of installation and maintenance of foundation(s) for the transformer(s) and related devices, plus that portion of the service lateral between the pad mounted transformer(s) and the service entrance.
- (b) The Distribution Provider will, at its own expense, increase the capacity of an existing, permanent, Distribution Provider-owned overhead service lateral in the same location provided the transformer capacity does not exceed 500 kilovolt-amperes.

Transformer capacity in excess of 500 kilovolt-amperes will require the installation of pad mounted transformer(s) and the replacement of all or a portion of the overhead service lateral with an underground service lateral. The Distribution Provider will be responsible for the costs and expenses of the overhead portion of the service lateral, the installation and maintenance of the transformer(s) and related devices, plus that portion of the underground service lateral between the pad mounted transformer(s) and the connection point on the overhead line at a terminal pole to be located adjacent to the transformer installation. The Distribution Customer will be responsible for the costs of installation and maintenance of the foundation(s) for the transformer(s) and related devices, plus that portion of underground service lateral between the pad mounted transformer(s) and the service entrance.

- (c) A Distribution Customer requesting a temporary increase in service capacity will pay for the enlarged facilities in accordance with Rule 6.H.

Where the Retail Customer's equipment and/or method of operation requires the installation of service facilities (transformers, etc.) in excess of that considered by the Distribution Provider as required for normal utilization of service ("excess facilities"), such excess facilities shall be installed and the Distribution Customer shall pay the Distribution Provider its costs and expenses for such excess facilities.
