PSC NO: 15 ELECTRICITY COMPANY: CENTRAL HUDSON GAS & ELECTRIC CORPORATION INITIAL EFFECTIVE DATE: 08/01/04 SUPERSED LEAF: 212

REVISION:

SUPERSEDING REVISION: 4

<u>SERVICE CLASSIFICATION NO. 6</u> (Cont'd)

RESIDENTIAL TIME-OF-USE SERVICE (Cont'd)

<u>SPECIAL PROVISIONS</u> (Cont'd)

6.3 Residential Small Solar Electric Generation - Residential customers may install photovoltaic generators with rated capacity of not more than 10 kw to supply their electric load and/or sell electric energy to the Company as set forth in General Information Section 3.C. Interconnection costs charged by Central Hudson for a dedicated transformer should it be determined to be necessary, shall not exceed \$350. The total residential photovoltaic generator load on Central Hudson's system may not exceed 0.8 MW. Wiring and switches of these facilities may be arranged in parallel so as to permit the flow of current from the customer to the Company and vice versa.

Customers may choose from the following metering options:

- Using a single time-differentiated watthour meter with bidirectional capability to measure the flow of energy in both directions; or
- (b) Using two meters to separately measure the flow of energy in each direction, with the customer's net output measured by a non-time differentiated watthour meter; or
- (c) Using two meters to separately measure the flow of energy in each direction, with the customer's net output measured by a time-differentiated watthour meter purchased by the customer.

Customers electing to have their generator's output measured through a separate meter shall be responsible for the costs of any new meter box and socket, to the extent required.

Customers with Residential Small Solar Electric Generators who satisfy all installation and operation requirements will be allowed to combine their purchases from and sales to the Company in a billing period.
