## 27. ADJUSTMENT OF RATES IN ACCORDANCE WITH CHANGES IN THE COST OF GAS

### Factor of Adjustment

A factor of adjustment of 0.0135 cents per 100 cu. ft. will be applied to the average cost of gas to reflect lost and unaccounted for gas.

In accordance with the New York State Public Service Commission's Opinion and Order in Case No. 90-G-0673, the factor of adjustment to adjust the cost of gas for lost and unaccounted for gas will be determined in each Company rate case.

### Average Cost of Gas

The average cost of gas shall be computed monthly by:

- (1) applying the fixed rates and charges of the transporters, storage providers, and suppliers to the billing determinants associated with pipeline capacity, storage capacity, and supplier reservation charges, and dividing by the weather normalized quantities of gas taken for delivery to the utility's own customers during the 12 calendar months immediately preceding the computation date;
- (2) applying the variable rates and charges of the transporters, storage providers, and suppliers to the billing determinants associated with transportation, storage, and gas supply, for the forecasted weather normalized quantities of gas to be taken for delivery to the utility's own customers during the month in which the gas adjustment will be in effect;
- (3) applying the average unit cost of gas in storage at the date of the computation to the quantities of gas estimated to be withdrawn from storage for a utility's own customers during the month in which the gas adjustment will be in effect;
