SERVICE CLASSIFICATION NO. 18 (Cont'd)

GENERAL SERVICE - RETAIL ACCESS PROGRAM (Cont'd)

SPECIAL PROVISIONS (Cont'd)

18.5 POWER FOR JOBS (Cont'd)

Term of Service

The term of service for each customer is to be established by the New York State economic development power allocation board not to exceed three years, provided however that if the board directs the partial or complete withdrawal of the Customer's allocation during the term, the term or amount of service under this special provision will be adjusted accordingly.

Determination of Energy and Demand Billing

In the event that PASNY is unable to deliver in any billing period any portion or all of the Power for Jobs power to the Company as contracted for under the "Power for Jobs Purchase and Resale Agreement" between PASNY and the Company, each customer shall have his contract lowered by the amount of reduced deliveries allocated on a pro rata basis across all Power for Jobs allocations. All such energy not delivered and subsequently replaced with load supplied by the Customer's Retail Supplier shall be billed according to the Customer's applicable rates under this Service Classification.

PASNY shall provide to the Company at least 30 days prior written notice for initial delivery of an allocation to an individual Customer, changes in the amount of such allocation and termination of any such allocation, unless otherwise agreed upon by PASNY and the Company. Service will be initiated, modified or terminated as applicable under this special provision on or before the end of such notice period.

Load factor sharing is the methodology which allocates metered deliveries between the Customer's Retail Supplier and Power for Jobs service furnished by PASNY for the purposes of billing. The load factor sharing methodology for this provision shall be the ratio of the Customer's Power for Jobs contract demand allocation and the Customer's maximum metered demand in the billing period and preceding eleven billing periods to apportion both demand and energy between the two sources of supply for the month.

- 1) A Power for Jobs ratio will be calculated by comparing the Customer's Power for Jobs allocation to the Customer's monthly maximum demand measured during the current and preceding eleven monthly billing periods.
