5.B. ALLOWANCES FOR THE PROVISION OF ELECTRIC SERVICE

(1) Allowance for Required Residential Underground Service

Where the Company is required by the Commission or a governmental authority having jurisdiction to do so, to provide residential underground service, the cost and expense which the Company must bear, except as otherwise provided herein and in 16 NYCRR Parts 98, 99 and 100, the Company will provide the material and installation costs for a total of up to 100 feet of underground distribution line (including supply line) and underground service line per dwelling unit served, measured from the Company's existing electric system (from the connection point on the bottom of the riser pole for overhead to underground connections) to each applicant's meter or point of attachment with respect to each residential building. For multiple occupancy buildings, the Company shall bear the material and installation cost for up to 100 feet of underground line times the average number of dwelling units per floor used for residential and non-residential purposes.

If the Company receives an application for underground residential service outside a residential subdivision, and a governmental authority having jurisdiction to do so has required that the facilities be installed underground, the Company may, if the per-foot cost of installing the necessary facilities will be greater than two times the charge per foot set forth in General Information Section 5.C.(3), petition the Public Service Commission to allow a greater contribution to the cost of installation of the facilities than this Section would otherwise require, or to set up a special rate district.

(2) Allowance for Non-Mandatory Residential Underground Service

Where an applicant requests a residential underground service line in situations other than those described in General Information Section 5.B.(1), the cost and expense which the Company must bear shall include the material and installation costs equivalent to the costs relating to the length of overhead service line to which the applicant would otherwise be entitled under General Information Section 5.B.(3) measured from the Company's existing electric system (from the connection point on the bottom of the riser pole for overhead to underground connections) to each applicant's meter or point of attachment with respect to each residential building. Such applicant is also entitled to material and installation costs for up to 500 feet of single phase overhead distribution line.
