INITIAL EFFECTIVE DATE: 12/01/16 SUPERSEDING REVISION: 7  
STAMPS:

**Service Classification No. 12**  
**Temperature-Controlled Service - Non-Residential (continued)**  
**(Rate Codes: 330, 331, 332)**

**Remote Switchover of Dual Fuel Equipment:**

Customers with Automatic Equipment

For Customers with automatic equipment, when the Company receives a report that the Farmingdale Airport Temperature has reached the Designated Interruption Temperature, the Company will remotely switch over the Customers' equipment to an alternate fuel ("Company initiated interruption"). The Company will endeavor to provide Customers with advance notice of potential interruptions utilizing the Communications Protocol stated within this service classification. If there is a remote switch over (even if the Customer had already been switched over because the Local Outside Temperature had already reached the Designated Interruption Temperature), there will be a remote switch over of the Customer's equipment back to natural gas once the Farmingdale Airport Temperature reaches the Designated Resumption Temperature. If there was no remote switch over and the Customer's equipment switched over because the Local Outside Temperature reached the Designated Interruption Temperature, the Customer's equipment will be switched back to natural gas once the Local Outside Temperature reaches the Designated Resumption Temperature.

Customers with Semi-Automatic Equipment

When the Company receives a report that the Farmingdale Airport Temperature has reached the Designated Interruption Temperature for Customers with automatic equipment, the Company will remotely activate an alarm at the semi-automatic Customer sites notifying such Customers to manually switchover to an alternate fuel ("Company initiated interruption"). The Company will endeavor to provide Customers with advance notice of potential interruptions utilizing the Communications Protocol stated within this service classification. If the alarm was activated remotely, the Customer may manually switch back to natural gas once the Farmingdale Airport Temperature reaches the Designated Resumption Temperature for Customers with semi-automatic equipment. If the Local Outside Temperature reached the Designated Interruption Temperature and the Designated Interruption Temperature had not been reached at Farmingdale Airport, the Customer may manually switch back to natural gas once the Local Outside Temperature reaches the Designated Resumption Temperature.

**Annual System-Wide Test:**

The Company will conduct an annual system-wide test of Customers' compliance served under this Service Classification.
