**GENERAL INFORMATION****13. SERVICE CLASSIFICATION RIDERS (Continued)****RIDER N (Continued)****NET METERING FOR CUSTOMER GENERATORS****APPLICABILITY (Continued)**

If a customer has solar, wind, and/or Micro-Hydro generating equipment as well as Micro-CHP and/or fuel cell electric generating equipment, each eligible for service under this Rider, the customer will qualify for service under this Rider only if the load served by the residential Micro-CHP and/or fuel cell electric generating equipment is not served under the same net-metered account as the load served by the solar, wind, and/or Micro-Hydro generating equipment. If a non-residential customer has farm waste electric generating equipment as well as solar, wind, and/or Micro-Hydro generating equipment at its Non-Farm Location, the customer will qualify for service under this Rider only if the load served by the farm waste electric generating equipment is not served under the same net-metered account as the load served by the solar, wind and/or Micro-Hydro generating equipment. Customers with electric generating equipment that is not eligible for net metering will not qualify for service under this Rider unless the customer segregates the additional equipment and associated load so that it is not served under this Rider. Only customers billed under energy-only rates may qualify for service under this Rider if there is energy storage on the premises in addition to the electrical generating equipment eligible for net metering, provided the energy storage supplies energy to a single account behind the same meter as the generating equipment.

Service will be provided under this Rider to customers with eligible electric generating equipment (as described above) subject to the provisions of this Rider, including the applicable Term of Service contained in this Rider, as follows:

- (A) non-wind electric generating equipment located either on the premises of demand-billed customers who do not participate in Community Distributed Generation ("CDG") or on the premises of demand-billed or energy-only Remote Net Metering ("RNM") Host Accounts, provided that the project either is in service or completed Step 4 of SIR for generation rated 50 kW or less or Step 8 of the SIR for generation rated above 50 kW no later than July 17, 2017;
- (B) non-wind electric generating equipment located on the premises of CDG Host Accounts, provided that: (1) the project either is in service or completed Step 4 of the SIR for generation rated 50 kW or less or Step 8 of the SIR for generation rated above 50 kW no later than July 17, 2017; and (2) the total rated generating capacity of CDG Host Accounts served under this Rider does not exceed 23 MW;
