RE: Case 11-E-0176, Recharge New York Program

Dear Acting Secretary Cohen:

Consolidated Edison Company of New York, Inc. (“Con Edison” or the “Company”) is filing with the Public Service Commission (the “Commission”) an amendment to its Schedule for Electricity Service, P.S.C. No. 10 – Electricity (the “Electric Tariff”), applicable to the Company’s customers in the City of New York and the County of Westchester.

The Electric Tariff leaf identified below is issued to become effective on May 20, 2013.

<u>Leaf No.</u>	<u>Revision No.</u>	<u>Superseding Revision No.</u>
97	3	2

Background

The “Recharge New York Implementation Agreement” between the New York Power Authority (“NYPA”) and the Company, executed June 28, 2012, indicates (on page 21), “In the event that the Company delivers power and energy to a Program Participant that is served under a standby service rate, the Company shall perform the load splitting in accordance with the methodology detailed in the Company’s Tariff, but the Company agrees to negotiate in good faith with the Authority to determine the most appropriate load splitting methodology and to file tariff modifications with the PSC, if necessary.”

General Rule 11, “Billing Applicable to Service Under Certain Economic Development Programs,” of the Electric Tariff is applicable to customers who receive allocations under various economic development programs, including Recharge New York (“RNY”) – Special Provision G of Service Classification No. 9 and World Trade Center Power – Special Provision 8 of the PASNY Tariff, PSC No. 12 – Electricity.

General Rule 11 indicates that energy and reactive power demand will be allocated to each economic development program based on the Allocation Ratio. For Standby Service customers, the Allocation Ratio equals the ratio of the demand served under the economic development program to the Contract Demand at the premises. For other customers, the Allocation Ratio equals the ratio of the demand served under the economic development program to the registered monthly maximum demand. To determine the amount of electricity to be supplied by NYPA for each customer served under an economic development program, the customer's Allocation Ratio is multiplied by the customer's total kilowatthour usage for the month. The balance of the customer's requirements is then served either by the Company or under the retail access program.

Reason for Filing

A Standby Service customer was recently granted an award under RNY. NYPA subsequently requested, in emails dated December 20 and December 28, 2012, that the Company modify its Allocation Ratio for Standby Service customers. Specifically, NYPA requested that the Allocation Ratio for Standby Service customers be made the same as the Allocation Ratio for non-Standby Service customers, i.e., the ratio of the demand served under the program to the registered monthly maximum demand.

To accommodate NYPA's request, the Company is requesting to prospectively change the Allocation Ratio under General Rule 11 for Standby Service customers. As a result of this change, when a Standby Service customer's registered monthly maximum demand is lower than its contract demand, more of the electricity supply will be served by NYPA and less by Con Edison or the customer's ESCO.

Conclusion and Notice

On January 29, 2013, the Commission issued an order suspending the operation of the amendments submitted by the Company in Case 13-E-0030. The Company makes this filing pursuant to 16 NYCRR Part 61.10(c)(5), or subject to the approval of the Commission pursuant to 16 NYCRR Part 61.10(a), as the Commission deems appropriate.

The Company requests waiver of newspaper publication, because only one Standby Service customer receives service under General Rule 11 (i.e., under RNY). The Company will provide a copy of this filing to both NYPA and that customer.

Sincerely,

/s/ William A. Atzl, Jr.
Director
Rate Engineering Department
